

Software Solutions

Range brochure

- **Print Software** - Manage and monitor your print devices
- **Device Management** - Administer and maintain your print devices
- **Apps** - Get the most out of your multifunction devices
- **Document Management & Workflow** - Transform your processes through digitisation
- **Document Capture** - Digitise and streamline document processes
- **Barcode/Labelling Software** - Get more out of your barcode and label printers

Enhancing workflows - the benefits of software solutions

Toshiba provides a wide range of workflow enhancing solutions from embedded and on-premise to cloud, suitable for SMB's to large corporates across a wide range of vertical markets.

Workflow enhancing solutions use rules-based logic or AI to automate and speed up time-consuming manual document processes and tasks.

The key benefits of workflow enhancement can range from eliminating tedious, time-consuming repetitive tasks to streamlining important processes to make them faster and more efficient, minimising errors, ensure compliance and visibility, boost productivity, increase accountability, identify inefficiencies in current processes, reduce paper usage and ultimately save organisations time and money.

Print Software

Manage and monitor your print devices

Keep control of your printing with Toshiba's print software solutions. Implement print policies and quotas to significantly reduce your printing waste as well as your costs. Our software is easy to install and administrate, allowing you to take full advantage of your print fleet's potential.

e-FOLLOW.cloud

Cloud print management

Toshiba's e-FOLLOW.cloud is a modern digital Software as a Service (SaaS) print management solution, enabling teams to control everything from the point of 'click to print' right through to selecting finishing options at the printer. All carefully processed in the encapsulated environment of a secure cloud.

- Toshiba's e-BRIDGE and selected A4 multifunctional devices* can be connected to the e-FOLLOW.cloud without the need of local servers or client software.
- Customer credentials and data are strictly separated from each other, guaranteeing the highest level of data security.
- Self-scaling, making it suitable for organisations with only a few devices, up to enterprises with an unlimited number of users, locations, and MFPs.
- Replaces all local print servers. No costs are required for the acquisition and operation of server hardware, its maintenance and administration.
- All communications are consistently encrypted end-to-end, ensuring maximum security for users-, billing-and print data.
- Users can send their print jobs from their local workstations, from their home office or from their mobile devices.

*For compatible A4 multifunctional devices, please speak to your Toshiba provider.

e-BRIDGE Global Print

Cloud print enablement

Toshiba's e-BRIDGE Global Print simplifies printing from wherever you work, allowing you to send print jobs directly to cloud-connected Toshiba MFPs, and then release when ready at the printer of choice. It lets users print from anywhere, to anywhere, and track it – all from the integrated app.

e-BRIDGE Global Print takes the hassle out of printing for employees and IT alike, adding up to a more productive workforce.

- Submit print jobs to the cloud from anywhere for location flexibility.
- Sign in from Google Workspace™ or Microsoft365® accounts to quickly enable printing.
- Release print jobs on demand conveniently and securely with access card or pin.
- Gain insights into your printing and devices with MFP usage logs.
- Eliminate IT overhead costs associated with managing print servers and more.

PaperCut MF

Output management and cost control

PaperCut MF is an enterprise software solution which allows you to easily manage your print assets, collect usage data by location and device, identify inefficiency and implement cost recovery and allocation strategies to maximise your system productivity and return on investment. Eliminate waste, encourage responsible behaviour and make users and departments accountable for their print usage.

PaperCut MF includes embedded software that runs on your Toshiba Multifunction Product (MFP)/printer to enable tracking, control and secure print release directly from the device's panel.

- Track all MFPs/printers
- Secure print release
- Find-me printing
- Control and report use
- Print archiving and watermarking
- Recover costs
- Enforce print policy
- Minimise waste
- Enable BYOD printing

PaperCut NG

Print monitoring and control

PaperCut NG is the easy way to automatically monitor and manage printing in your organisation, giving you control over your costs and environmental impact.

The PaperCut software checks print jobs on the print server and analyses them, applying rules to enforce your print policies. PaperCut NG gives you full control over your fleet of devices:

- Manage and control printing using tracking, quotas or pay-for-print charging.
- Support BYOD and mobile device users print from their own device.
- Apply rules based print policies to minimise waste and maximize productivity, e.g., to prevent printing of emails, require large jobs to be duplexed or restrict colour printing.
- Monitor your print fleet, with toner level detection and printer error alerts by email or SMS.
- Monitor your print jobs with thumbnail style viewer

PaperCut Hive/Pocket

Cloud print management

PaperCut Hive/Pocket is a cloud-native, fully embedded print management software. Ideal for businesses that require a secure and flexible printing solution to track, control and enable print, copy and scan.

- Server-less printing makes printing easy again, simply send a document to a single print queue, then securely release the print job at your Toshiba device.
- Print quickly from any device to any printer, including from Chromebook, Android, macOS, iOS, and Windows devices
- Convenient print release options - PaperCut's Find-Me Print feature allows the setup of one universal print queue that users can send their jobs to then simply walk up to any printer to release it
- Simple and quick onboarding for users and guests
- Print, copy and scan tracking for accountability
- Keep your documents private and protected with built-in security features
- Reduce paper waste, save on toner and create sustainable habits through the implementation of eco-friendly print policies

Intuitive BI for PaperCut

Intuitive dashboard management

Intuitive Dashboards for PaperCut MF/Hive is a pre-integrated Business Intelligence (BI) solution which is delivered with a complete set of standard configurations.

The configured dashboards deliver significant value to those who have an interest in understanding how printers and MFPs are being used by the wider user population and communicate the environmental impact of printing. They show the latest available usage data for all multifunction devices, providing shorter and more effective decision cycles.

- Quickly and easily identify the key issues, without spending large amounts of manual effort
- Large quantities of critical print-related information can be easily analysed
- Review what applications people are printing from and identify key trends, making it easy to create print policies
- Rationalise your print estate identifying high volume users and examining the use patterns for different users and departments
- Easily create and distribute reports to key departments on their usage/cost

Device Management

Administer and maintain your print devices

Take control with Toshiba's device management software and manage the process of implementation, operation and maintenance of your print devices. Administrative tools and processes allow for the maintenance and upkeep of your print estate.

e-BRIDGE Cloud Connect

Device management for networked MFPs

Toshiba e-BRIDGE CloudConnect (ECC) offers comprehensive security and management for networked MFPs. ECC securely and reliably collects operation data transmitted from your MFPs over HTTPS/SSL connection. Only parties from contracted maintenance companies with valid permission can view the data.

- Cloud-based support service for an end-to-end process for monitoring device communications
- Increase uptime with proactive device status alerts and remote diagnostics
- Reduce workload with scheduled meter readings and automated supplies delivery
- Keep machines up to date with the latest firmware and remote data back up
- Provide stability across your MFP fleet with regular, remote health checks

e-FleetManager

Administration of networked barcode, printer and MFP systems

Toshiba's e-FleetManager is a dedicated and reliable network management tool. Installed on-premise, it allows centrally controlled device and group administration and optimisation of all networked Toshiba printers including A3, A4 OEM and barcode printers. It allows you to measure almost everything with regards to device and consumables usage.

- Create Groups by using parallel grouping replicating logical or organisational structures
- Provides detailed monitoring of the print fleet and its usage status
- Hassle-free administration and configuration, with remote firmware updates as well as the centralised push-out of device settings, to all compliant Toshiba systems at once
- Cloning device settings via e-FleetManager helps save considerable time and ensures identical setup of multiple systems
- Customisable reporting templates and export functionalities simplify reporting and can either be sent automatically to an e-mail address or stored within folders on the e-FleetManager server.
- Automated billing processes can be supported through the submission of regular, scheduled device meter readings
- Automatic email alerts can be set to send to anyone and are triggered by device notifications, threshold settings or scheduled device reporting

Apps

Get the most out of your Toshiba multifunction devices

Get more out of your multifunction systems with Toshiba's apps. Productive, intuitive and always up to date, these apps will further improve your document handling without the need for additional infrastructure. Add new features and enhancements easily and seamlessly integrate these clever apps with your Toshiba print systems.

e-BRIDGE Plus for Zone OCR

Intelligent scan solution to improve document handling

Toshiba's e-BRIDGE Plus for Zone OCR app is an intelligent scan solution to improve document handling processes. The OCR function recognises up to three different zones consisting of text, numbers and barcodes on a scanned document, which can then be used to automatically sort and/or serve as folder and file names. Use pre-set templates to define OCR zones with a highlighter and help improve work efficiency.

e-BRIDGE Plus for Barcode Scan

Detect and read barcodes on your documents while scanning

Toshiba's e-BRIDGE Plus for Barcode Scan app helps you save time and makes your document workflows even more efficient. This app scans your documents for you, automatically detecting and interpreting barcodes on them. By recognising the information precisely, the digitised documents are then automatically stored in previously determined folders and may then be forwarded efficiently from there to downstream workflows.

ID Card Scanning

Quickly scan the front and back of ID-documents

Toshiba's ID-Card Scanning app enables you to quickly scan the front and back of ID-documents via your Toshiba MFP, automatically saving them onto the same page, storing them as a one-page PDF in a predefined location in your network. Digital documents created this way can easily be used for further automated processes.

e-BRIDGE Plus for Box

Scan/print documents into/from your Box storage area

Enhance collaboration within your workspace by securely managing, sharing and accessing your content from anywhere to anyone. Connecting the e-BRIDGE Plus for Box app with your Toshiba MFP allows you to scan originals at high-speed, then save them automatically in your Box cloud storage space. Your digitised documents are then available to authorised colleagues for sharing – at any time, from anywhere and without any limitation. Alternatively just print files directly to your Toshiba MFP from your Box storage area.

e-BRIDGE Plus for WebDav

More connectivity, more simplicity

The e-BRIDGE Plus for WebDAV app seamlessly integrates your Toshiba MFP into your server environment, allowing you to browse your WebDAV server structure straight from the MFP control panel. Documents can be scanned at high-speed and stored directly in the same folder you also access from your computer. Printing documents from a WebDAV Server with the app is as simple as scanning, helping you to optimise your document processes further.

e-BRIDGE Plus for Dropbox

Scan/print documents into/from your Dropbox storage area

Dropbox helps simplify your work, by providing a central place to both access and share files. Optimise the use of Dropbox and increase your efficiency by seamlessly integrating the Toshiba MFP into your processes with the e-BRIDGE Plus for Dropbox app. You will be able to scan documents directly from your Toshiba MFP into your Dropbox or simply print straight from there.

e-BRIDGE Plus for Exchange Online

Connect with your Office 365

Toshiba's e-BRIDGE Plus for Exchange Online app allows you to exchange documents with ease by connecting your Toshiba MFP to your Microsoft Office 365 environment. Scanned documents can be sent to any recipient directly from your Toshiba MFP without manual intervention. Sent messages will appear automatically in the outbox of your e-mail client, helping streamline your work processes.

e-BRIDGE Plus for Google Drive

Save scanned documents in Google Drive cloud storage space

Toshiba's e-BRIDGE Plus for Google Drive app is a powerful tool that allows you to scan originals swiftly from your Toshiba MFP and save them automatically in your Google Drive cloud storage space. Your digitised documents are then available to authorised colleagues for sharing – at any time, from anywhere and without any limitation, improving collaboration. Alternatively just print them directly on your Toshiba MFP.

e-BRIDGE Plus for Green Information

Track paper usage in the workplace

The e-BRIDGE Plus for Green Information app helps you keep a really close eye on the volume of paper printed in the workplace and your resulting CO₂ footprint. It displays the number of printouts and reused sheets of up to ten Toshiba MFPs and/or reusing units in your network. Monitor the use and identify where you can improve your sustainability.

e-BRIDGE Plus for One Drive for Business

Optimise daily workflow

Toshiba's e-BRIDGE Plus for OneDrive for Business app allows you to digitise documents at high speed and save them in your OneDrive for Business storage space so you can easily print, store or share documents in a few simple steps. Enhance the overall productivity of your Microsoft Office 365 workspace with this app, while taking advantage of the power of your Toshiba MFP. Optimise your daily workflows and processes and save both time and money.

e-BRIDGE Plus for SharePoint Online

Share and access data

Connect your Toshiba MFP to SharePoint Online with Toshiba's e-BRIDGE Plus for SharePoint Online app and make sharing and accessing data significantly easier. Scan documents at high-speed directly to your SharePoint environment and make them available to other users. Automate your processes to print existing data from your SharePoint service on your Toshiba MFP to significantly increase your operational efficiency.

e-BRIDGE Plus for USB Storage

Scan/print from your portable USB

By installing the e-BRIDGE Plus for USB storage app on your Toshiba MFP, scanning and printing documents directly and securely from your portable USB device becomes even easier and safer. Enjoy the ease of use this tool brings and increase both your efficiency and your flexibility.

e-BRIDGE Plus for Voice Guidance

Aural guidance for copying

The e-BRIDGE Plus for Voice Guidance embedded app, and optional external speaker provide an aural guide for those with a visual impairment, with a much simplified function set for copying with a high contrast.

e-BRIDGE Print & Capture

Utilise your MFP from your mobile device

e-BRIDGE Print & Capture is a mobile device app that allows you to use your Toshiba e-STUDIO MFPs to print/scan to cloud storage. Scanned images/documents can be converted into editable formats. Discover devices on your network, or pick from a list of most recently used MFPs or select your MFP by scanning the QR code on the screen.

eConnect TouchFree™

Control from a mobile device

Give walk-up users remote control access to their Toshiba MFP from their smartphone or tablet with eConnect TouchFree™. Users no longer need to touch the front panel of the MFP, ensuring safer operation in a shared, multi-user environment.

Document Management and Workflow

Transform your processes through digitisation

Document management and workflow solutions can help you tackle your complex document workflows that involve seemingly endless hours of scanning, mailing, saving, approving, collating, archiving and filing documents, in both paper and digital forms. They'll help save time and money, whilst also improving security and compliance.

e-FileWatcher

Flexible digital workflows and processes

Toshiba's e-FileWatcher is ideal for modelling flexible workflows. A powerful workflow engine which monitors folders, mailboxes and print data streams to capture, convert, process and route documents and data. Once the data or documents have been captured the rules-based workflow engine can be used to define processes which can convert, merge, redact, lookup external data and more. Documents or data can then be saved or exported to multiple options like printers, OneDrive, network folders and e-mail.

- Convert your files from one format to another, helping your organisation transfer data and information seamlessly
- Documents can be converted from an existing folder, email address or MFP and converted via OCR to Word, Excel or text searchable PDF/A (as well as many others)
- Route converted documents to email addresses (as a hyperlink or as an attachment), network folder, to FTP or to a range of document management systems including SharePoint
- Supports the creation of custom scripts, allowing for the creation of bespoke conversion solutions
- Customised information such as a time stamp or water mark can be added to scanned documents
- Automatically save documents to a defined network folder or print e-mail attachments as soon as they are received
- Easy administration via a configurator to allow you to create workflows and their links, providing a quick overview of your defined processes at any time
- Automatic email alerts can be set to send to anyone and are triggered by device notifications, threshold settings or scheduled device reporting

Foldr

Multi-platform remote file access and file sharing

File management can get messy when you are using multiple providers like OneDrive, Google Drive and Dropbox, and even messier when you add in your on-premise file servers. Foldr provides a simple unified interface to all of these endpoints while allowing users to quickly find, share and collaborate using a single user ID.

- Connect all your existing/on-premise storage and link to all cloud storage service providers - users can be automatically linked to their OneDrive and SharePoint sites using a service account
- Provides full content search anywhere on any document. OCR files in place and schedule archived document OCR
- Users can create groups for sharing and create short URLs to files and folders.
- Available for iOS, Android, Windows, Mac and Web - apps map a normal drive, so you can work on your files as if they were stored on your computer
- Online services including Office 365, Google G Suite, Salesforce, Dropbox and many more are supported
- Granular permissions system - control access to almost all of Foldr's features using your existing users and groups

DocuWare

Document management and workflow automation

DocuWare provides complete document management functionality, helping you transform your business through digitisation with comprehensive features for optimising the processes that power the core of your business.

Move away from paper-based processes, automate your document workflows, and protect your data and documents with secure, centralised archiving. By removing wasted time and uncertainty from your processes, your teams will be free to focus on the work that drives productivity and profit. DocuWare is perfect for distributed and remote teams that need to operate at full productivity.

It doesn't matter what type of documents or how many you need to manage; it doesn't matter how many employees work with the solution, or the processes they'd like to optimise; and it doesn't matter which applications need to be integrated with DocuWare – it is designed to always meet your needs.

- Remove manual, paper-driven processes by turning them into convenient, digital, user-centric experiences
- Reduce paper usage and cut costs, improve data security and streamline operations
- Eliminate the manual steps involved in repetitive, routine tasks associated with paper documents
- Automate common processes and drive efficiency, remove risk and improve profits
- Provide access to documents anytime, anywhere and from any device
- Embrace standards of control, transparency, security and privacy

Intuitive BI for DocuWare

Intuitive dashboard management for AP dashboards

Intuitive Dashboards for DocuWare is a Business Intelligence (BI) dashboard solution which reports on the status and performance of the end-to-end AP automation solution.

- Streamline Accounts Payable processes
- Gain visibility over workflows and potential bottlenecks with pre-built dashboards
- Make informed decisions regarding suppliers, training, and the status of invoices
- Identify opportunities for automation and digitalisation

Comprising of three 'out of the box' dashboards, which can be further customised to suit customer requirements as part of the installation and scoping process:

Invoice in Process Dashboard

See your top 100 invoices by value and status in workflow and analyse/highlight outstanding invoice issues to improve processing. Spot potential bottlenecks in the process e.g. invoices missing receipts, PO or other information

Supplier Performance Dashboards

Examine supplier performance with both high level and detailed views, and enhance supplier reviews with accurate, up to date information. Helps to easily identify suppliers with problematic invoice accuracy

Staff Performance Dashboards

Analyse proactivity of staff members in resolving or approving invoices where manual intervention is required, and identify team members who are potentially acting as a bottleneck to the process or where training may be required for individual AP team members.

Document Capture

Digitise and streamline document processes

Automate your processes with a document capture solution - extract the important information you need from documents or data, such as meta-data used for indexing the files, or use optical character recognition (OCR) or key information extraction so your files are searchable and more usable.

e-ScanFlow

Image capture, OCR and routing

e-ScanFlow is a powerful yet lean solution for document digitisation. It digitises and streamlines your document routing processes with user-friendly, customisable options for automated document capture, processing and secure distribution. With e-ScanFlow, your Toshiba multifunction device becomes a full workflow engine that will save you time and eliminate errors, whilst improving your business processes

The software comes with the standard network scan function and integrated user management, providing a range of options for quick and easy optimisation of scan workflows. e-ScanFlow also features OCR functionality to help create searchable PDFs. The standard functionality can be expanded with the addition of modules (i.e. Fax, Meta-Scan, Translation, Workflow and OneDrive for Business modules) to meet your specific requirements, e.g. the transfer of digitised documents to your industry solution, or expansion of the Toshiba e-BRIDGE Next MFP with new functions.

- Save time and spend less money when processing your documents, for example, the digitisation of a process can minimise document shipping costs and reduce the need for hardcopy document storage costs
- Keep documents secure through the automation of document processes and workflows, and by controlling user-access to workflows at the device
- Provides centralised administration across locations for your Toshiba MFPs
- Enable your organisation to build complex workflow processes in a minute, and transform your Toshiba devices into powerful workflow machines, with the ability to process multiple scan jobs in parallel
- Improve productivity by accelerating the processing, filing and distribution of paper documents by automating the capture of your organisation's key data
- Automate error-prone manual data entry and manage complex process and workflows at the push of a button on your Toshiba device
- Easy usability for document capture and routing to integrate scanned documents into your processes and workflows
- Installation and configuration are quick and straight-forward, to ensure you're up and running as fast as possible - plus, it connects seamlessly with e-FileWatcher for additional functionality

Kodak Capture Pro

Extract essential business data with accuracy and speed

Kodak alaris

Organisations today are faced with a near-constant influx of paper and digital documents that threaten employee productivity. With the exponential growth of data that arrives in various formats and from multiple sources, a helping hand is needed to find new and innovative ways to take the complexity out of information capture.

Kodak Capture Pro helps ensure that business processes run smoothly, reducing costs and enabling innovation that improves customer experience. It truly is the key to overcoming challenges related to secure and reliable capture. And, by letting you share information across your organisation, it enables knowledge sharing and collaboration throughout your enterprise.

- Eliminate the bottlenecks and inefficiencies of document preparation and operator intervention during scanning
- Empower your decision makers and increase customer satisfaction with streamlined efficient business processes
- Superior imaging quality and features reduce manual data entry and error correction downstream
- Leverage existing technology and investments while building new information capture solutions

Kodak Info Input

Data capture and automation for everyone, anywhere

Kodak alaris

When organisations look to implement enterprise level capture and automation, they're faced with an array of challenges. They must find innovative ways to handle the complex nature of fragmented office locations.

Info Input from Kodak Alaris is like a conductor, directing your data from various sources across the enterprise. It's a powerful web-based solution that intelligently captures, extracts, and delivers information to drive business results. This gives your entire organisation the flexibility to connect people to documents, documents to processes, and processes to systems.

With Info Input, you can easily capture complete, accurate information on the first scan. The intuitive user interface requires minimal training and reduces errors with one-button easy scanning from within your business applications.

Data can be captured using a mobile app or extracted from a variety of digital file types across your organisation, even off-site. Intelligent features like classification, advanced indexing and extraction get information into your business processes quickly and accurately.

- Grow with your data capture needs - from a single department to complex, high-volume enterprise requirements
- Empower your decision makers and increase customer satisfaction with streamlined, efficient business processes
- Automatically determine document types and extract data without having to manually sort files, and as a result see an increase in productivity
- Realise savings in setup, maintenance, and software updates using web-based deployment and management

ancoraDocs™

Advanced data capture

ancoraDocs™ is an intelligent document classification and advanced data capture solution. It uses artificial intelligence to identify a document by looking at the attributes of a document, e.g. document size, text layout, logos, tables etc. and the semantic content.

- Digitise and automate the process of identifying and classifying documents and recover many hours from paper-intensive processes
- Streamline paper intensive processes and reduce manual data entry by 60% to 90% by automatically extracting header, footer, and line-item-detail data elements to share with your ERP
- Ensure data is captured accurately and posted in the right format to your ERP, e.g. ensure an invoice has a matching PO, or a sales order is being placed at the correct price

AP Invoice Automation

ancoraDocs Invoices is a complete invoice processing solution - from scanning to ERP, and specifically designed for Accounts Payable departments to help improve the unique business processes and workflow. A flexible, customisable solution to meet the needs of Accounts Payable Departments large and small.

Sales Order Processing Automation

ancoraDocs Sales Orders enables faster processing of orders, helping your team to contact customers sooner regarding problem orders and retrieve information faster when handling customer inquiries.

General Forms Processing

ancoraDocs Forms can help you eliminate the labour intensive, error prone and time consuming manual processing of forms and other general business documents.

Barcode/Labelling Software

Get more out of your barcode and label printers

Enhance your Toshiba barcode printer with the tools to create and print any type of professional label. Our barcode and labelling software helps improve safety, security efficiency and compliance across a wide range of applications.

BarTender

Label design software

BarTender is a sophisticated and user-friendly barcoding software which allows you to create, automate and manage labels, barcodes and RFID tags. Suitable for small businesses and enterprises. It gives you the power to cut costs, reduce downtime and improve quality by giving you the tools to create, automate and manage labels, barcodes, RFID tags and more. BarTender features include:

- Print anywhere, at any time, on any operating system
- Easily connect labeling and enterprise data
- Print faster with streamlined operations and improved performance
- Seamlessly integrate label printing with web applications

Professional edition

BarTender Professional Edition provides dynamic business printing with data entry forms, Intelligent Templates™, database connectivity, encoding and on-demand, anywhere, any device printing. BarTender Professional Edition is for organisations of any size that need to standardise their label printing operations.

Automation edition

BarTender Automation Edition provides efficient automated printing with powerful process automation and business application integration. Enterprises of any size can seamlessly automate their label and document printing.

Enterprise edition

For businesses that operate in regulated industries, span multiple locations or need centralized control of their label design and printing operations, BarTender Enterprise Edition provides comprehensive enterprise-wide printing with centralised management, workflow orchestration and revision control, auditing, web and mobile printing, always-on high-availability and added security.

NiceLabel

Cloud and on-premise labelling solutions

Software NiceLabel provides you with all the tools you need to manage your labelling process, from label design and template management to printing, all in one, easy-to-use system. Designed for rapid deployments at one site or across multiple locations, it is an ideal solution for mid-sized or growing businesses.

- Easily design barcode labels in minutes
- Centrally and securely store and manage your labels, and access them from anywhere
- Guarantee accuracy by integrating with your product data
- Integrate with business systems, such as ERP, MES and WMS
- Easily scale printing across your business

NiceLabel Cloud

With Software NiceLabel Cloud, you'll have everything you need to manage your entire labeling process, and you'll be set up in no time! You can integrate the solution with your key business systems to create a more efficient labelling process. Start small or local, but have the option to easily expand the system across multiple locations. You also benefit from one of the most secure cloud platforms available on the market in Microsoft Azure.

NiceLabel LMS (on-premise)

Software NiceLabel Label Management System (LMS) gives you access to the same powerful labelling platform on-premise, if the timing for a cloud-based solution isn't quite right for you yet. With an on-premise installation, you can customise the solution to your specific business needs and IT environment, and you have a clear path to the cloud when you're ready to make the change.
